MACHINE LEARNING

In Q1 to Q11, only one option is correct, choose the correct option:

1. Which of the following methods do we use to find the best fit line for data in Linear Regression?

   A) Least Square Error
   B) Maximum Likelihood
   C) Logarithmic Loss
   D) Both A and B

   Answer: Least Square Error

2. Which of the following statement is true about outliers in linear regression?

   A) Linear regression is sensitive to outliers
   B) linear regression is not sensitive to outliers
   C) Can't say
   D) none of these

   Answer: Linear regression is sensitive to outliers

3. A line falls from left to right if a slope is_____?

   A) Positive
   B) Negative
   C) Zero
   D) Undefined

   Answer: Negative

4. Which of the following will have symmetric relation between dependent variable and independent variable?

   A) Regression
   B) Correlation
   C) Both of them
   D) None of these

   Answer: Both of them

5. Which of the following is the reason for over fitting condition?

   A) High bias and high variance
   B) Low bias and low variance
   C) Low bias and high variance
   D) none of these

   Answer: Low bias and high variance

6. If output involves label then that model is called as:

   A) Descriptive model
   B) Predictive modal
   C) Reinforcement learning
   D) All of the above

   Answer: Predictive modal

MACHINE LEARNING

7. Lasso and Ridge regression techniques belong to _____?

    A) Cross validation   B) Removing outliers
    C) SMOTE   D) Regularization

    Answer: Cross validation

8. To overcome with imbalance dataset which technique can be used?

    A) Cross validation   B) Regularization
    C) Kernel   D) SMOTE

    Answer: Kernel

9. The AUC Receiver Operator Characteristic (AUCROC) curve is an evaluation metric for binary classification problems. It uses _____ to make graph?

    A) TPR and FPR   B) Sensitivity and precision
    C) Sensitivity and Specificity   D) Recall and precision

    Answer: TPR and FPR

10. In AUC Receiver Operator Characteristic (AUCROC) curve for the better model area under the curve should be less.

    A) True   B) False

    Answer: True

11. Pick the feature extraction from below:

    A) Construction bag of words from a email
    B) Apply PCA to project high dimensional data
    C) Removing stop words
    D) Forward selection

    Answer: Apply PCA to project high dimensional data

MACHINE LEARNING

In Q12, more than one options are correct, choose all the correct options:

12. Which of the following is true about Normal Equation used to compute the coefficient of the Linear Regression?

    A) We don't have to choose the learning rate.
    B) It becomes slow when number of features is very large.
    C) We need to iterate.
    D) It does not make use of dependent variable

    Answer: It becomes slow when number of features is very large

Q13 and Q15 are subjective answer type questions, Answer them briefly.

1. Explain the term regularization?

   Answer: It's used by adding an additional penalty term in the error function, The additional term controls the excessively fluctuating function such as the coefficients don't take extreme values

2. Which particular algorithms are used for regularization?

   Answer: Ridge Regression and LASSO (Least Absolute Shrinkage and Selection Operator) Regression

3. Explain the term error present in linear regression equation?

   Answer: a linear regression model tracking a stock's price over the time, the error term is the difference between the expected price at a particular time and the price that was actually observed
